

This is the page to show the list of the projects:

- [Logic.Gate](#)
 - Logic.Gate is an ongoing project that is currently in the development process
 - The goal is to provide an education platform for university students
 - Aimed to provide knowledge of programming to first-year students learning to program for the first time, to better equip them for rushing lectures in the programming field
 - The proposal can be found [here](#)
 - The front page that is currently published to the public is available [here](#)
- [Jsonification](#)
 - Personal Project
 - Jsonification is the set of codes that are designed and developed to access the specific website and collects desired data without using an API
 - Initially started as the part of the project: waterlooEats
 - Currently being optimized and justified to match the needs of the waterlooEats project
- [waterlooEats](#)
 - Group Project
 - waterlooEats is a web-based project that allows the users to rate and see the ranking of a specific menu of UW Food Services
 - Intended to use an API provided by the school, but API was not maintained and provided valid data
 - Decided to make use of the Jsonification project which is my personal project that was developed
