Dear Hiring Manager,

I came across your job posting on WaterlooWorks for the [[position]] role at [[company name]]. After carefully reviewing the posting and the company's website, I believe that I am a good fit for the posted position.

I am a second-year computer engineering student at the University of Waterloo. Prior to university, I was interested in the software industry. I especially noticed my interest through relevant courses including Fundamentals of Programming, Project Studio and Algorithms and Data Structures.

Outside the academics, I have participated in and worked on some side projects focused on algorithms and software development including embedded programming, RTOS and API. As I examined my interest and performance, [[field of position]] appeared to be one of my strong points among all the fields in software development. [[some sentences of interest]]. Moreover, I have worked with my friends and as well as in the software industries as developer and researcher. As a developer, I have experienced various environments from low-level programming using C/C++ to GUI and ML programming using high-level languages such as Python.

In addition, I have learned a lot through projects and work experiences, including knowledge in programming and designing algorithms. In my previous workplaces, I have applied the knowledge I have gained from the assigned work to promote maximum performance to ultimately exceed the expectations of my supervisors.

As a candidate for a Bachelor of Applied Science in computer engineering, I have been practicing both software and problem-solving skills. School materials and personal experiences I gained in the field make me a perfect fit for the [[position]] role at [[company name]]. I will be greatly pleased to work with bright-minded individuals and teams at [[company]] and to bring my qualities to the company. I look forward to hearing from you soon. Thank you for your consideration.

Sincerely,
Andy (Hongjun) Yun
